Recent events suggest that PHP 6 will not be released before 2011 – if, indeed, it is released at all. ^ Foundation, Node js. Among these, magic_quotes_gpc and register_globals[279] configuration directives were the best known; the latter made any URL parameters become PHP variables, opening a path for serious security vulnerabilities by allowing an attacker to set the value of any uninitialized global variable and interfere with the execution of a PHP script. On new OWASP Top 10". Kamp criticizes the protocol itself for being inconsistent and having needless, overwhelming complexity. Retrieved 2013-11-24. Thomson, M. "I wonder why people keep writing that PHP was ever written in Perl. ^ "PHP and Digg". To accelerate bug reporting and improve the code, Lerdorf initially announced the release of PHP/FI as "Personal Home Page Tools (PHP Tools) version 1.0" on the Usenet discussion group comp.infosystems.www.authoring.cgi on June 8, 1995.[1][18] This release already had the basic functionality that PHP has today. Sun Microsystems. zephir-lang.com. However, before PHP 7, type declarations could not be used with scalar types such as integer or string.[66] Below is an example of how PHP variables are declared and initialized. "Wait for it – HTTP/2 begins Working Group Last Call!". February 2015. ^ "Last Call: (Hypertext Transfer Protocol version 2) to Proposed Standard from The IESG on 2014-12-31". Twitter. ^ Lerdorf, Rasmus (1995-06-08). Retrieved June 1, 2016. The Working Group presented HTTP/2 to the Internet Engineering Steering Group (IESG) for consideration as a Proposed Standard in December 2014,[6][7] and IESG approved it to publish as Proposed Standard on February 17, 2015 (and was updated in February 2020 in regard to TLS 1.3).[8][9] The HTTP/2 specification was published as RFC 7540 on May 14, 2015.[10] The standardization effort was supported by Chrome, Opera, Firefox,[11] Internet Explorer 11, Safari, Amazon Silk, and Edge browsers. [12] Most major browsers had added HTTP/2 support by the end of 2015.[13] About 97% of web browsers used have the capability.[14] As of October 2021[update], 47% (after topping out at just over 50%) of the top 10 million websites supported HTTP/2.[15] Its proposed successor is HTTP/3, a major revision that builds on the concepts established by HTTP/2.[2][16][17][18] Goals The working group charter mentions several goals and issues of concern:[4] Create a negotiation mechanism that allows clients and servers to elect to use HTTP/1.1, 2.0, or potentially other non-HTTP protocols. ^ "Taint mode support". WordPress was [...] built on PHP. ^ Kempkens, Alex. If PHP has no module support for a web server, it can always be used as a Common Gateway Interface (CGI) or FastCGI processor; in that case, the web server is configured to use PHP's CGI executable to process all requests to PHP files.[228] PHP-FPM (FastCGI Process Manager) is an alternative FastCGI implementation for PHP, bundled with the official PHP distribution since version 5.3.3.[229] When compared to the older FastCGI implementation, it contains some additional features, mostly useful for heavily loaded web servers.[230] When using PHP for command-line scripting, a PHP command-line interface (CLI) executable is needed. Retrieved 27 November 2020. We arrange live webinars periodically to provide information about various courses. www.zend.com. Below is an example of an enum:
